Company Portfolio :

A basic page where it show all important information about the company and different services and it provides the contact information

Services

Don't Be Busy, Be Productive

Vehicle Sales

Selling new and used cars, including high-performance sports cars and other specialty vehicles. Vehicle Maintenance: Performing routine maintenance tasks, such as oil changes, tire rotations, and brake fluid replacement. .

Vehicle Accessories

Selling and installing vehicle accessories, such as custom wheels, exhaust systems, and audio equipment. Vehicle Storage: Offering secure and convenient storage solutions for vehicles, both short-term and long-term. .

Vehicle Repair

Providing repair services for various types of automotive work, from basic maintenance to complicated repairs. Including transmission repair and auto electrical services. Vehicle Insurance: Offering insurance policies and coverage for personal and commercial vehicles. .

Vehicle Transportation

Vehicle Transportation: Providing services for transporting vehicles, such as car shipping and car rental services.

Signup page :

The User Sign-Up page is a critical component of the Car Rental Management System, serving as the gateway for customers to create their accounts and engage with the reservation system. This page is designed to collect essential personal information from users and establish a secure and seamless account creation process. where users input their personal details to create an account Like Userame, Email , Password and Password Confirmation

Login page :

The login page serves as the gateway for users and administrators to access the system as the admin put his information like username and password to go to the Admin Dashboard and the normal user put his information like the username and password to go to the User Dashboard as it has all cars that could be rented

User Dashboard :

The User Dashboard Page serves as the central hub for customers who have successfully logged into the Car Rental Management System. This page is strategically designed to provide users with a comprehensive view of available cars, facilitating easy search, and enabling seamless reservation and rental processes. Each car listing includes an add button, allowing users to initiate the reservation process with a single click.

Availability status is dynamically updated to reflect real-time changes

Conclusion:

In conclusion, the implementation of the Car Rental Management System has been a comprehensive and successful endeavor. The project successfully addressed the key requirements set forth by the Car Rental company, providing a user-friendly platform for both customers and administrators. The system seamlessly automates manual procedures, streamlining the reservation process, and enhancing overall efficiency.
